EXPERIENCE

Software Engineer II - Citibank, Pune

Aug 2022 – Dec 2025

- Architected and owned a high-throughput batch processing system using Spring Batch with partitioned multi-threading, processing **500K+ transactions per batch** at **1.7x throughput** over the baseline. Led design reviews with product, operations, and partner teams to drive end-to-end production rollout.
- Identified a cost-visibility gap in meeting culture and built **MeetCost**, a meeting cost estimation service integrated with Outlook scheduling - batched directory lookups, in-memory computation via Caffeine cache, **100,000 lookups/day** at sub-second latency; drove **30% reduction** in unnecessary invites.
- Developed and deployed 3 event-triggered microservices that replaced a licensed ETL toolchain - querying across multiple transaction tables, applying routing and business rules, and emitting structured XML for downstream partners; cut **\$50K/year** in licensing costs.
- Designed and shipped a shared security middleware - a custom Spring Security filter chain extension for request validation, input sanitization, and session hardening - packaged as an auto-configured internal library and adopted across **10+ microservices**; cleared **all 15 findings** from a third-party security assessment with a **100% pass rate**.
- Launched **The Learning Loop**, a team tech-sharing initiative, and mentored junior developers on system design while helping new hires ramp up on team architecture and engineering practices.

Stack: Java, Spring Boot/ Batch/ Security, Kafka, SQL, React, Angular, Docker, Shell Scripting

Software Engineer - Citibank, Pune

Jul 2021 – Jul 2022

- Owned a full frontend rewrite of a legacy operations dashboard to React + TypeScript, serving **2,000+ users** for triggering, monitoring, and scheduling automated workflows; integrated with backend REST APIs and consumed real-time events from a job orchestration system for live execution tracking.
- Streamlined the release process through full pipeline automation, reducing deployment prep time by **50%** and failure rates by **~85%** (15% → under 2%).
- Built a trade-query chatbot for operations users - built across **4 microservices** including an API gateway and rule engine, with real-time data fetching to serve dynamic trade responses.

Stack: Java, Spring Boot, React, TypeScript, PostgreSQL

PROJECTS

Event-Driven Sensor Pipeline with RAG Chatbot

[Link](#)

Real-time IoT pipeline ingesting sensor data via Kafka, caching in Redis with TTL-based expiry, and streaming to clients over SSE; includes a RAG chatbot that explains the architecture and implementation.

Stack: Go, Kafka, Redis, SSE, OpenAI API, LangChain

EDUCATION

B.E. in Computer Science, **Birla Institute of Technology & Science, Pilani**

2017 – 2021

SKILLS

Languages:	Java, TypeScript, SQL, C++, Python, Shell Scripting
Frameworks & Messaging:	Spring Boot, Spring Batch, Spring Security, Kafka, gRPC, Protobuf, SSE, React, Angular
Databases & Caching:	MySQL, PostgreSQL, Oracle, Redis
Tooling:	Docker, Kubernetes, OpenShift, AWS (EC2, S3), Git, Linux
AI & Dev Tooling:	Claude Code, OpenAI API, RAG Pipelines, LangChain

ACHIEVEMENTS

KVPY Scholar (AIR 468) | **JEE Advanced 2017** (AIR 4521)
